

Automatic Flow Control System

I. Application Scope

The laser liquid level detector and the launder gate plate are used in combination with the overall launder equipment, mainly to accurately control the liquid level height so as to precisely control the flow rate of the cast aluminum liquid in the launder.

II. Performance Advantages

High measurement precision, high accuracy, rapid response, and the measurement is not affected by the color of the object. With its durability, wide temperature range and high environmental interference resistance performances, it can reliably achieve stable, uniform, seamless scanning and reliable measurement results even in harsh environments.

III. Customer Cases
