

Tap Out Cone

Product Name	Performance and Application
Tap Out Cone	Made of high-alumina fibers, the original manual production process has been improved to a vacuum suction automatic equipment forming process, featuring high production efficiency, high quality stability and a finished product rate of 99%.

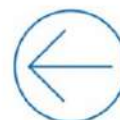

Product Advantages

1. Formed by vacuum suction of high-alumina fibers, with no aluminum adhesion and no slag falling off.
2. Uniform mass distribution, good elasticity, tight blocking, and stable flow control.
3. High hardness and long service life.

Assembly and Use

High-temperature Tap Out Cone
